# **PANASONIC Electric Works**

# **FP Series**

V1.0 or higher

# **Computer Link (MEWTOCOL-COM) Driver**

Supported version TOP Design Studio

## **CONTENTS**

We want to thank our customers who use the Touch Operation Panel.

1. System configuration Page 2

Describes connectable devices and network configurations.

2. External device selection Page 3

Select a TOP model and an external device.

**3.** TOP communication setting Page 4

Describes how to set the TOP communication.

4. External device setting Page 10

Describes how to set up communication for external devices.

5. Cable table Page 11

Describe the cable specifications required for connection.

6. Supported addresses Page 15

 Refer to this section to check the data addresses which can

communicate with an external device.

# 1. System configuration

The system configuration of TOP and "PANASONIC Electric Works – FP Series Computer Link" is as follows:

Series	СРИ	Link I/F	Communication method	System setting	Cable
		CPU built-in TOOL Port	RS-232C		
	550	CPU built-in RS-232C Port	RS-232C		
	FP2 EDOCH		RS-232C		
	FFZ3FI	AFPS	RS-422 ( 4-wire )		
			RS-485 ( 2-wire )		
		CPU built-in TOOL Port	RS-232C		
	FP-X		RS-232C		
		AFPX	RS-485 (2-wire)		
		CPU built-in TOOL Port	RS-232C

## 3. TOP communication setting

The communication can be set in TOP Design Studio or TOP main menu. The communication should be set in the same way as that of the external device.

## 3.1 Communication setting in TOP Design Studio

#### (1) Communication interface setting

- $\blacksquare [Project] \rightarrow [Property] \rightarrow [TOP Setting] \rightarrow [HMI Setup] \rightarrow [Use HMI Setup Check] \rightarrow [Edit] \rightarrow [Serial]$
- Set the TOP communication interface in TOP Design Studio.

Items	ТОР	External device	Remarks	
Signal Level	RS-232C / RS-422 / RS-485	RS-232C / RS-422 / RS-485		
Baud Rate	192	19200		
Data Bit	8			
Stop Bit	1			
Parity Bit	00	dd		

\* The above settings are examples recommended by the company.

Items	Description
Signal Level	Select the serial communication method between the TOP and an external device. (COM3 supports only RS-485.)
Baud Rate	Select the serial communication speed between the TOP and an external device.
Data Bit	Select the serial communication data bit between the TOP and an external device.
Stop Bit	Select the serial communication stop bit between the TOP and an external device.
Parity Bit	Select the serial communication parity bit check method between the TOP and an external device.

#### (2) Communication option setting

- [Project] → [Project Property] → [PLC Setting> COM1 > PLC1 : FP Series]
  - Set the options of the FP Series Computer Link communication driver in TOP Design Studio.

Project Option		×
Change HMI[H] Kadd PLC [A] Change PLC[C] K Delete PLC[D]		
PLC Setting   SYS: RD152XX   Option Models Setting   Fieldbus (0)   RFID (0)   COM3 (0)   COM3 (0)   Ethernet (0)   USBDevice (0)     Primary Option   Timeout   30   meec   Retry   Stablon Num   Setting   Stablon Num   Stablon Num   Command Header	Co	mm Manual
	Apply	Close

Items	Settings	Remarks
Interface	Select "Computer Link".	Refer to "2. External
Protocol	Select the serial communication protocol between the TOP and an external device.	device selection".
TimeOut (ms)	Set the time for the TOP to wait for a response from an external device.	
SendWait (ms)	Set the waiting time between TOP's receiving a response from an external device	
	and sending the next command request.	
Station Num	Enter the prefix of an external device.	
Command Header	Configure the header for the MEWTOCOL-COM protocol.	Initial Value: %

## 3.2. Communication setting in TOP

\* This is a setting method when "Use HMI Setup" in the setting items in "3.1 TOP Design Studio" is not checked.

■ Touch the top of the TOP screen and drag it down. Touch "EXIT" in the pop-up window to go to the main screen.

#### (1) Communication interface setting

■ [Control Panel] → [Serial]

Items	ТОР	External device	Remarks
Signal Level	RS-232C / RS-422 / RS-485	RS-232C / RS-422 / RS-485	
Baud Rate	192		
Data Bit	8		
Stop Bit	1		
Parity Bit	0	dd	

\* The above settings are setting examples recommended by the company.

Items	Description
Signal Level	Select the serial communication method between the TOP and an external device. (COM3 supports only RS-485.)
Baud Rate	Select the serial communication speed between the TOP and an external device.
Data Bit	Select the serial communication data bit between the TOP and an external device.
Stop Bit	Select the serial communication stop bit between the TOP and an external device.
Parity Bit	Select the serial communication parity bit check method between the TOP and an external device.

#### (2) Communication option setting

■ [Control Panel]  $\rightarrow$  [PLC]

Items	Settings	Remarks
Interface	Select "Computer Link".	Refer to "2. External
Protocol	Select the serial communication protocol between the TOP and an external device.	device selection".
TimeOut (ms)	Set the time for the TOP to wait for a response from an external device.	
SendWait (ms)	Set the waiting time between TOP's receiving a response from an external device	
	and sending the next command request.	
Station Num	Enter the prefix of an external device.	
Command Header	Configure the header for the MEWTOCOL-COM protocol.	Initial Value: %

### **3.3 Communication diagnostics**

■ Check the interface setting status between the TOP and an external device.

- Touch the top of the TOP screen and drag it down. Touch "EXIT" in the pop-up window to go to the main screen.
- Check that the settings of the connected ports in [Control Panel]  $\rightarrow$  [Serial] are the same as the settings of the external device.
- Diagnosis of whether the port communication is normal or not
- Touch "Communication diagnostics" in [Control Panel]  $\rightarrow$  [PLC].
- Check whether communication is connected or not.

Communication	Communication setting normal
diagnostics	
succeeded	
Error message	Communication setting abnormal
	- Check the cable. TOP, and external device settings. (Refer to Communication diagnostics sheet.)

Communication diagnostics sheet

- If there is a problem with the communication connection with an external terminal, please check the settings in the sheet below.

Items	Contents		Check		Remarks
System	How to connect the sys	stem	OK	NG	1 System configuration

			OK	NG	(For details, please refer to the PLC
					vendor's manual.)

## 4. External device setting

Configure the COM port of the external device as shown below by referring to the vendor's user manual.

Items	Settings	Remarks
Communication Mode	MEWTOCOL-COM Master/slave (Computer Link)	Fixed
Prefix	1	
Communication speed	19200	
Data Length	8	
Parity	Odd	
Stop Bit	1	
RS/CS Control	Restriction	XNote 1)
Transmit time delay	0	
Modem connection	Restriction	

XNote 1) When allowed, short-circuit the RS and CS pins of the external device.

#### % Control FPWIN 7 FP7 model COM 0 Setup Screen

## 5. Cable table

This chapter introduces a cable diagram for normal communication between the TOP and the corresponding device. (The cable diagram described in this section may differ from the recommendations of "PANASONIC Electric Works")

TC	)P				Externa	l device

# 6. Supported addresses

#### The devices available in TOP are as follows:

The device range (address) may differ depending on the CPU module series/type. The TOP series supports the maximum address range used by the external device series. Please refer to each CPU module user manual and be take caution to not deviate from the address range supported by the device you want to use.

Operand	Name	Bit address	Word address	Remarks
Х	Input relay	X00 ~ X511F	WX0 ~ WX511	*Note 1)
Y	Output relay	Y00 ~ Y511F	WY0 ~ WY511	*Note 1)
R	Internal relay	R00 ~ R886F	WR0 ~ WR886	*Note 1)
	Special relay	R9000 ~ R910F	WR900 ~ WR910	
L	Link relay	L00 ~ L639F	WL0 ~ WL639	*Note 1)
Т	Timer(contact)	T0 ~ T3071		
С	counter(contact)	C0 ~ C3071		
SV	Timer/Counter(Setting value)		SV0 ~ SV3071	
EV	Timer/Counter(Elapsed value)		EV0 ~ EV3071	
DT	Data register	DT0.0 ~ DT10239.F	DT0 ~ DT10239	*Note 2)
	Special data register	DT90000.0 ~ DT90511.F	DT90000 ~ DT90511	
LD	Link register	LD0.0 ~ LD8447.F	LD0 ~ LD8447	
FL	File register	FL0.0 ~ FL32764.F	FL0 ~ FL32764	

\*Note1) For X, Y, R, and L, bit/word processing is possible. In bit processing, 1 unit is hexadecimal and 10 units is decimal. (E.g.) X12C

Word processing is preceded by a W (e.g.) WX12 = X120-X12F 16-bit data)

\*Note 2) Special registers (DT) are only available for FP2/2SH/10SH.
