

MITSUBISHI Electric Corporation

MELSEC-AnA(A2U/A3U/A4U) Series

CPU Direct Driver

| | | | |
|--------------------|---------------|----------|-----------|
| Compatible version | OS | V4.0.0.0 | or higher |
| | XDesignerPlus | 4.0.0.0 | or higher |

CONTENTS

Thank you for using M2I's "Touch Operation Panel(M2I TOP) Series". Please read out this manual and make sure to learn connection method and process of TOP – External device"

1. System configuration Page 2

It explains device for connection, setup of, cable and structural system. Please choose proper system referring to this point.

2. Selecting TOP model and external devices Page 3

Select TOP model and external device..

3. Example of system settings Page 4

It explains setup example for communication connection between the device and external terminal.
Select example according to the system you choose in "1. System structure"

4. Communication settings details Page 5

It explains the way of configuring TOP communication.
If external setup is changed, make sure to have same setup of TOP with external device by referring to this chapter.

5. Cable diagram Page 8

Explains cable specifications required for access.
Select proper cable specifications according to the system you chose in "1. System configuration".

6. Support address Page 9

Check available addresses to communicate with external devices

1. System configuration

The configuration of system is TOP and "MITSUBISHI Electric Corporation – MELSEC-ANA(A2U/A3U/A4U) SERIES CPU DIRECT" as below.

| Series | CPU | Link I/F | Method | System settings | Cable |
|----------|--|------------|---------|-----------------|-------|
| MELSEC-A | A2U A2U-S1 A2US-S1 A2USH-S1 A3U A4U | CPU Direct | RS-232C | | |

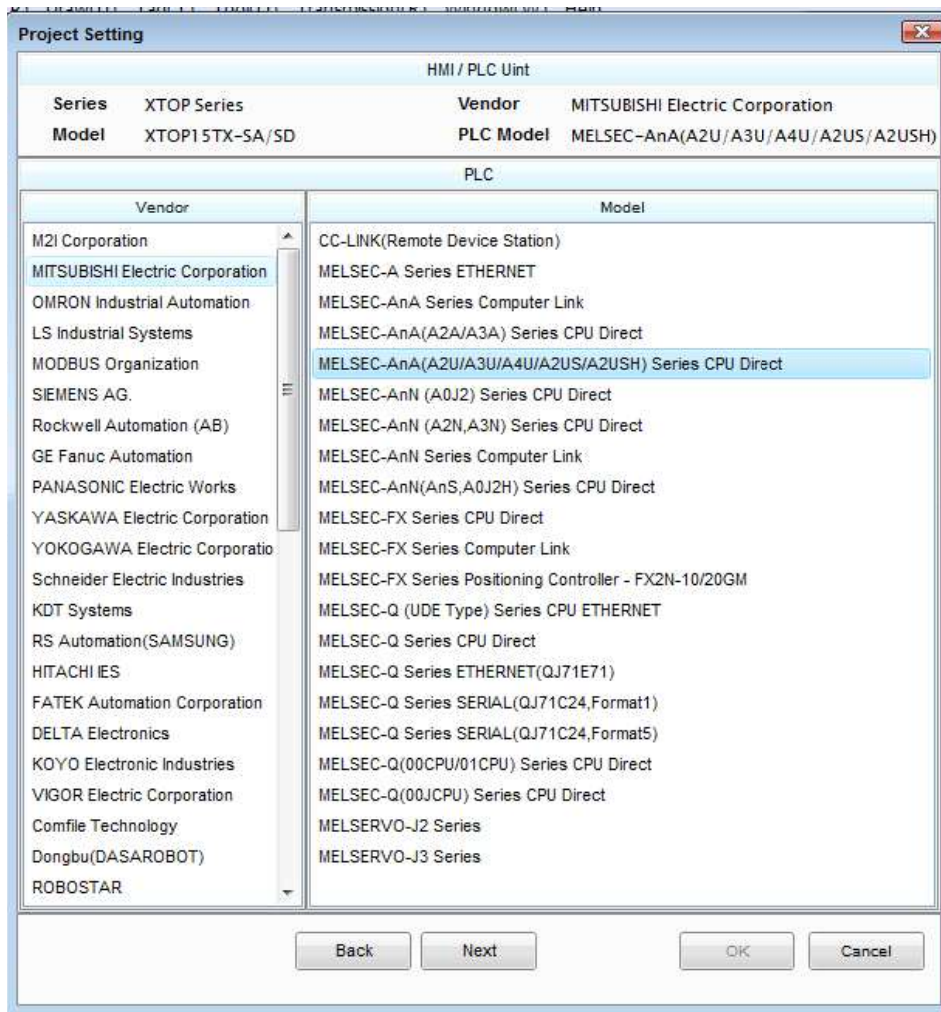

■ Connection configuration

- 1:1 connection (TOP 1 vs. external device)

2. Selecting TOP model and external devices

Select the external devices to connect to TOP..

| Setting details | | Contents | | | | |
|-----------------|---------------------------------------|---|--------|--------------|-------------|------|
| TOP | Series | Select the name of a TOP series that is to be connected to PLC. Before downloading the settings, install the OS version specified in the table below according to TOP series. <table border="1" style="margin-left: 20px;"> <thead> <tr> <th>Series</th> <th>Version name</th> </tr> </thead> <tbody> <tr> <td>XTOP / HTOP</td> <td>V4.0</td> </tr> </tbody> </table> | Series | Version name | XTOP / HTOP | V4.0 |
| | Series | Version name | | | | |
| XTOP / HTOP | V4.0 | | | | | |
| Name | Select the model name of TOP product. | | | | | |
| External device | Manufacturer | Select the manufacturer of external devices to be connected to TOP. Please Choose "MITSUBISHI Electric Corporation". | | | | |
| | PLC | Select the model series of external devices to be connected to TOP. Please choose " <u>MELSEC-ANA(A2A/A3A) SERIES CPU DIRECT</u> " Please check, in the "1. System configuration", if the relevant external device is available to set a system configuration. | | | | |

3. Example of system settings

Regarding of TOP and MELSEC-ANA(A2U/A3U/A4U) SERIES CPU DIRECT communication interface setting, we suggest as below.

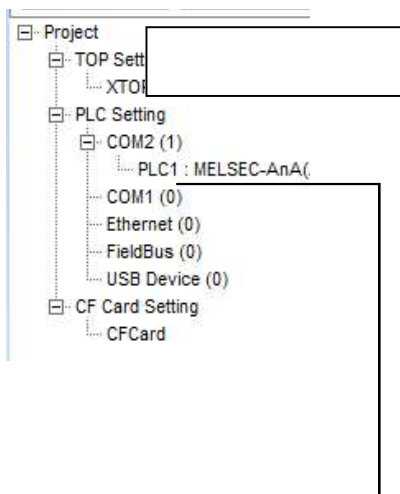

3.1 Example of settings 1

The system is set as below.

| Details | TOP | MELSEC-ANA(A2U/A3U/A4U) SERIES CPU DIRECT | Remark |
|-----------------------------|----------------|---|--------|
| Serial level (port/channel) | RS-232C (COM2) | RS-232C | Fixed |
| Serial baud rate [BPS] | 9600 | | Fixed |
| Serial data bit [Bit] | 8 | | Fixed |
| Serial stop bit [Bit] | 1 | | Fixed |
| Serial parity bit [Bit] | ODD | | Fixed |

(1) XDesignerPlus setup

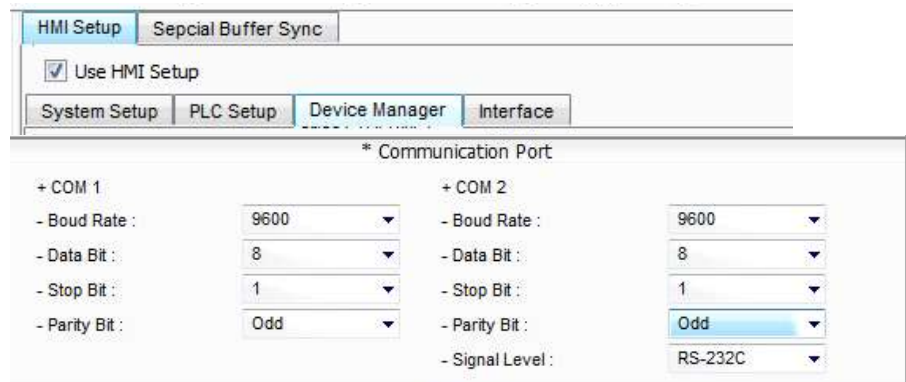

After setting the below details in [Project > Project Settings], download the detailed settings using TOP tool.

■ [Project > Project Property > Project > Settings > TOP Name]

Set the communication interface of TOP tool.

In the right window [HMI setup > Check "Use HMI setup"> Device manager]

■ External device settings

This sets the option of communication driver in "MELSEC-AnA(A2U/A3U/A4U) SERIES CPU Direct".

-PLC Address : External Device Setting Address

- Connection Method : Direct Connection with PLC Loader Port / put down whether if 2 port will be used.

- CPU Type : Sets the type of CPU.

(2) External device settings

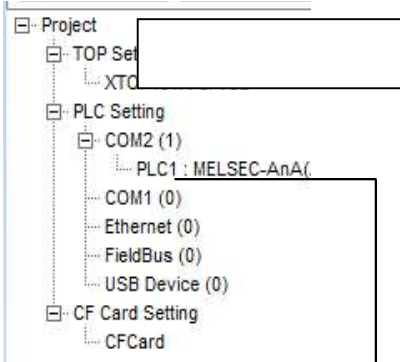

Regarding of the loader port communication interface for MELSEC-ANA(A2U/A3U/A4U) SERIES CPU DIRECT is set as this example's setting value.

4. Communication settings details

Communication settings are available at XDesignerPlus or TOP main menu. Communication settings must be identical with the external devices.

4.1 XDesignerPlus settings details

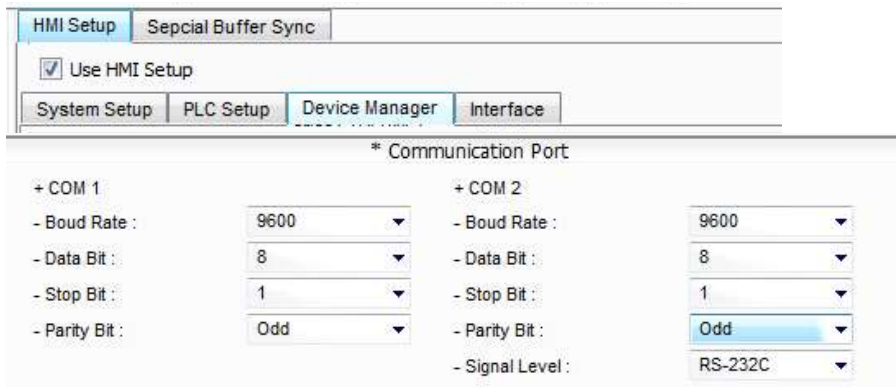

Select [Project > Project Property] to show the below window.

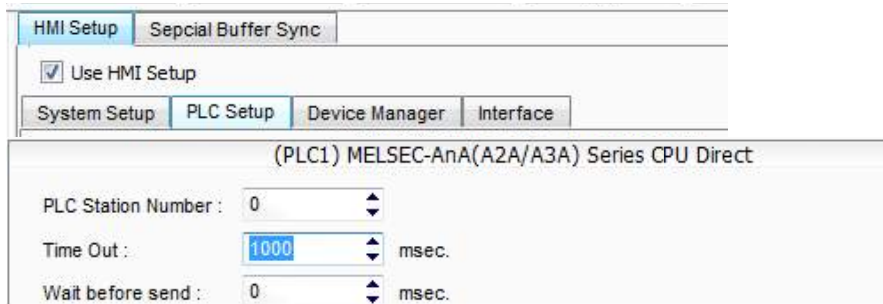

■ [Project > Project Property > Project > Settings > TOP Name]

Set the communication interface of TOP tool.

In the right window [HMI setup > Check "Use HMI Setup" > Device manager]

- At the right window, [HMI setup > Check "Use HMI Setup"> PLC setup]

■ External device settings

This sets the option of communication driver in "MELSEC-AnA(A2U/A3U/A4U) SERIES CPU Direct".

■ Communication Interface Settings

| Details | Contents |
|---------------------------|---|
| Signal level | External device – select serial communication method between TOPs. (COM1 supplies RS-232C only) |
| Baud rate | External device – select serial communication speed between TOPs. |
| Data bit | External device – select serial communication data bit between TOPs. |
| Stop bit | External device – select serial communication stop bit between TOPs. |
| Parity bit | External device – select serial communication parity bit check method between TOPs. |
| Time out [x100 mSec] | Set up TOP's response waiting time from external device at [0 – 5000] x 1 mSec. |
| Transmitting Delay Time [| Set up TOP's waiting time between response receiving – next command request transmission from |

| | |
|---|--|
| x10 mSec] Receiving Wait Time [x10 mSec] | external device at [0 – 5000] x 1 mSec. |
| PLC address [0~65535] | Address of other device. Select between [0 - 65535]. |

4.2 TOP main menu setup item

- When a buzzer is on during the power reset, touch 1 spot at the upper LCD to move to "TOP Management Main" display.
- Set up driver interface at TOP according to below Step1 → Step2.
(Press "TOP COM 2/1 setup" in **Step1** to change setup at **Step2**.)

Step 1. [PLC setup] - Setup driver interface.

| PLC setup | |
|--|--------------------------------------|
| PLC Address : 00 | Communication s Interface Setting |
| Timeout : 1000 [mSec] | |
| Delay time of transmission : 0 [mSec] | |
| TOP COM 2/1 : RS - 232C , 9600 , 8 , 1 , ODD | |
| TOP COM 2/1 setup communication test | |

Step 1-Reference.

| Details | Contents |
|--|---|
| PLC address [0~65535] | Address of other device. Select between [0 - 65535]. |
| Timeout [x1 mSec] | Set up TOP's response waiting time from external device at [0 – 5000] x 1 mSec. |
| Delay time of transmission [x1 mSec] | Set up TOP's waiting time between response receiving – next command request transmission from external device at [0 – 5000] x 1 mSec. |
| TOP COM 2/1 | TOP's Interface setup to external device. |

Step 2. [PLC setup] > [TOP COM2/COM1 setup] – Setup relevant port's serial parameter.

| Port Settings | |
|---|---|
| * Serial communication + COM-1 Port - Baud rate : 9600 [BPS] - Data bit : 8 [BIT] - Stop bit : 1 [BIT] - Parity Beat : ODD [BIT] - Signal level : RS – 232C | COM 1 Port Communication Interface Settings |
| + COM-2 Port - Baud rate : 9600 [BPS] - Data bit : 8 [BIT] - Stop bit : 1 [BIT] - Parity Beat : ODD [BIT] - Signal level : RS – 232C | COM-2 Port Communication Interface Settings |

Step 2-Reference.

| Details | Contents |
|--------------|---|
| Baud rate | External device – select serial communication speed between TOPs. |
| Data bit | External device – select serial communication data bit between TOPs. |
| Stop bit | External device – select serial communication stop bit between TOPs. |
| Parity bit | External device – select serial communication parity bit check method between TOPs. |
| Signal level | External device – select serial communication method between TOPs. |

4.3 Communication diagnosis

- TOP - Confirming interface setting condition between external devices
 - Move to Menu by clicking the top side of LCD screen as resetting the power of TOP.
 - Confirm if Port [COM 2 or COM 1] setting that is willing to use in [Communication Settings] matches with the setting of external devices.

- Port Communication Issue Diagnosis

- PLC Setting > TOP [COM 2 or COM 1] click "[Communication Diagnosis](#)" button.
- Diagnosis dialog box will pop up on the screen, you can judge by following information that are shown on box no. 3 section.

OK! Communication setting normal

Time Out Error! Abnormal Communication setting
 - Error in the setting situation of Cable and TOP / External device
(reference : Communication Diagnosis sheet)

- Communication Diagnosis Sheet

- Please refer to the information below if you have a problem between external devices and communication connection.

| Designer Version | | | | O.S Version | | |
|----------------------|---|-------------------------------|-------|-------------|---------|----|
| Details | Contents | | | | Confirm | |
| System configuration | Name of CPU | | | | OK | NG |
| | Name of confront port that is communicating | | | | OK | NG |
| | System Connection Method | 1:1 | 1:N | N:1 | OK | NG |
| Connection Cable | Name of Cable | | | | OK | NG |
| PLC setup | Setup address | | | | OK | NG |
| | Serial baud rate | [BPS] | | | OK | NG |
| | Serial data bit | [BIT] | | | OK | NG |
| | Serial Stop bit | [BIT] | | | OK | NG |
| | Serial parity bit | [BIT] | | | OK | NG |
| | Assigned Address Limit | | | | OK | NG |
| TOP setup | Setup port | COM 1 | COM 2 | | OK | NG |
| | Name of Driver | | | | OK | NG |
| | Confront Address | Project Property Setup | | | OK | NG |
| | | When Diagnosing Communication | | | OK | NG |
| | Serial baud rate | [BPS] | | | OK | NG |
| | Serial data bit | [BIT] | | | OK | NG |
| | Serial Stop bit | [BIT] | | | OK | NG |
| Serial parity bit | [BIT] | | | OK | NG | |

5. Cable diagram

This Chapter is to introduce the connection between TOP and relative devices. (Cable diagram that is being introduced in this chapter is "Mitsubishi Electric Corporation".)

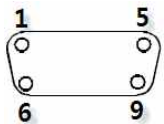

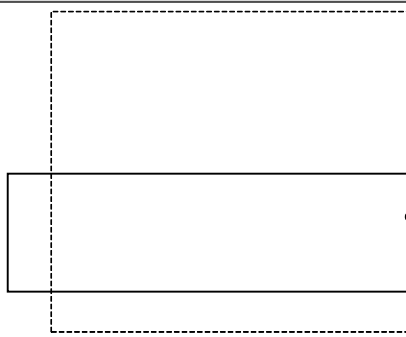

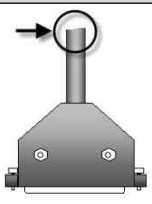

5.1 Cable diagram

Please use "TOP422C"(sold by M2I Corp.) for the cable between TOP and MELSEC-AnA(A2U/A3U/A4U) Series CPU Direct.

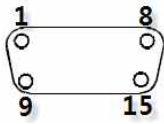

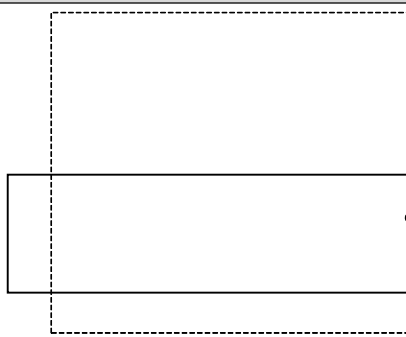

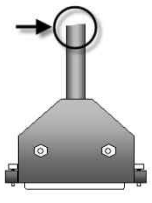

■ If the cable needs to be changed from 9 pin D-SUB to 15 pin, please refer to information below.

(1) In case of TOP COM 2 side is 9 pin

| XTOP COM2 | | Cable connection | Cable cross section | |
|---|-----------------|--|---------------------|---|
| pin arrangement * caution 1) | Pin Arrangement | | Cable color | |
|  <p>Based on the front side of Communication cable connector D-SUB 9 Pin male</p> | 1 |  | Red |  <p>TOP422C Exclusive Cable 25pin Cable cutting plane</p> |
| | 2 | | Yellow | |
| | 3 | | Green | |
| | 4 | | Blue | |
| | 5 | | White | |
| | 6 | | Black | |
| | 7 | | | |
| | 8 | | | |
| | 9 | | | |

*Caution1) Pin arrangement is shown from connecting face in cable connection connector.

(2) If TOP COM 2 is 15 pin (10~15 pin is skipped due to non use)

| XTOP COM2 | | Cable connection | Cable cross section | |
|---|-----------------|--|---------------------|--|
| pin arrangement * caution 1) | Pin Arrangement | | Cable color | |
|  <p>Based on the front side of Communication cable connector D-SUB 15 Pin male</p> | 1 |  | Red |  <p>TOP422C Exclusive Cable 25pin Cable cutting plane</p> |
| | 2 | | Yellow | |
| | 3 | | Green | |
| | 4 | | Blue | |
| | 5 | | White | |
| | 6 | | Black | |
| | 7 | | | |
| | 8 | | | |
| | 9 | | | |

*Caution1) Pin arrangement is shown from connecting face in cable connection connector.

6. Support address

Devices that are usable with TOP is as below.

There might be difference in the range of device (address) by type / series of CPU module TOP series supports the maximum address range that external device series use Please refer each CPU module user manual carefully for devices that you desired to use to prevent not getting out of range.

| Type | Remark | Bit designated address | Word designated address |
|------------------|--------|------------------------|-------------------------|
| Input | Bit | X0000 – X1FFF | X0000 – X1FF0 |
| Output | Bit | Y0000 – Y1FFF | Y0000 – Y1FF0 |
| Link relay | Bit | B0000 – B1FFF | |
| Link register | Word | | W0000 – W1FFF |
| STEP Relay | Bit | S0000 - S2047 | |
| Special relay | Bit | F0000 – F2047 | F0000 – F2032 |
| Latch Relay | Bit | L0000 – L8191 | |
| Internal Relay | Bit | M0000 – M8191 | M0000 – M8176 |
| Special relay | Bit | M9000 - M9255 | M9000 – M9240 |
| Data Register | Word | | D0000 – D8191 |
| Special Register | Word | | D9000 - D9255 |
| Timer-Coil | Bit | TC0000 - TC2047 | |
| Timer-Current | Word | | TN000 – TN2047 |
| Timer-Point | Bit | TS0000 – TS2047 | |
| Counter-Coil | Bit | CC0000 – CC1023 | |
| Counter-Current | Word | | CN000 – CN1023 |
| Counter-Point | Bit | CS0000 – CS1023 | |
